

Compact and Elegant Flexible Use

Refined design, stable structure

Integrated design of fresh air unit and air conditioner, simple and exquisite.
Available in multiple color options.

Note: Available color options may vary by region. Please contact us for confirmation.

Intelligent Fresh Air

Independent Activation

It can also be used with the air conditioner, and there is automatic operation mode with the air conditioner.

Easy to Install HEPA Filter

The left and right sides are with replaceable HEPA filters, and the installation position is unrestricted.

Easy Installation at Both Sides

It can be installed at either side of the air conditioner, easy for installation and disassembly

Top Filter Protection

The top filter is with filter protection, which is easy to disassemble and clean.

Equipped with an outdoor air duct protective cover that is rainproof, bird-proof, and rodent-proof.

Intelligent Control Better Life

Three ways of intelligent control

KINGHOME MiniERV supports remote controller, wired controller, and KINGHOME+ APP control. Convenient ways for free selection.

MiniERV Dual-Way Fresh Air

30m³/h Dual-Way Fresh Air

Dual-way "FIGURE 8" circulation track

Inspired by the hummingbird's high-speed, agile flight path — moving in a graceful "8" shape during forward and backward motion. The MiniERV's dual-way circulation system allows air intake and exhaust to operate simultaneously, delivering a more powerful and balanced ventilation effect.

KINGHOME MiniERV rapidly removes CO₂, formaldehyde, odors, and bacteria, replacing stale indoor air with clean, oxygen-rich air to support a healthier and more comfortable environment.

Note: The definition and testing standards for valid fresh air rate are excerpted from Chapter 13 of GB/T 1236-2017 "Performance Testing of Standardized Air Duct for Industrial Ventilation Unit".

Air Circulation in as Fast as 30mins.

High efficiency

- Simultaneously brings in fresh air and exhausts stale air
- Enables full-room air circulation even when doors and windows are closed
- Delivers superior performance compared to traditional one-way systems

Note: Testing was conducted in a room with a height of 3 m and an area of 10 m². Data is sourced from the Gree Laboratory, and results may vary depending on testing environment and conditions.

Heat Exchange Keep Warm and Moist

Heat exchange module of fresh air

The fresh air flow and the exhaust air flow conduct counter-flow heat exchange inside the heat exchange module.

- Decrease fresh air load
- Reduce humidity loss
- Efficient heat recovery
- Accelerate heat exchange by special materials

KINGHOME One of The First Brands to Offer

Dual-Way Energy Exchange Circulation System in the Industry

No need to worry about the temperature difference of fresh air during hot summers or cold winters — KINGHOME MiniERV brings comfort all year round.

Note: Please refer to the actual temperature.

Save energy 1KWh/Day

Compared with the traditional ventilation equipment without total heat exchange function, the air conditioner can **save about**

Note: The data is calculated according to the standard fresh air working condition and the unit runs for 24h a day

Low Noise Operation

The noise is as low as 19dB

The noise level of the KINGHOME MiniERV is as low as 19 dB when operating independently or together with an air conditioner — quiet and ideal for a restful sleep.

Note: Testing was conducted under standard temperature, pressure, and humidity conditions. The data is based on Gree laboratory test reports.
